

IN THE ABSTRACT OF THE DISCLOSURE

The Abstract has been amended as follows:

ABSTRACT

METAL DETECTOR AND ITS TEST PROCEDURE

~~This invention concerns a~~ A test procedure and a metal detector ~~having comprising~~ transmitting coils, receiving coils and an electronic processing circuit adapted to detect variations in the signals received by the receiving coils against a reference value. The metal detector; ~~characterized in that it~~ also includes a test module which has a selector ~~selection means~~ able to detect a test request, and a controller ~~means~~, used when a test request is detected by the ~~selection selector~~ means, able to compare the signals from the receiving coils during the subsequent passing of a known standard reference object with a predetermined response through the detector. ~~This invention also concerns a test procedure.~~
